Concepts

Concepts

- If A can do a piece of work in x days, the work done by A in a 1 day is $1/x$.
- If A's work efficiency is 4 times as compared to B, ratio of work done by A and B is 4 : 1 and the ratio of times taken by A and B to finish a work is 1 : 4 (inverse ratio of work done)
- If a group of people work together on a task, it is assumed that all people are of the same efficiency unless it is specified otherwise.
- If M1 men can do a piece of work in D1 days by working H1 hours per day and M2 men can do the same work in D2 days by working for H2 hours per day, when all men work at the same rate, then
$$M1 \times D1 \times H1 = M2 \times D2 \times H2$$
- If M1 men can do W1 work in D1 days by working H1 hours per day and M2 men can do W2 work in D2 days by working for H2 hours per day, where all men work at the same rate, then

$$\frac{M1 \times D1 \times H1}{W1} = \frac{M2 \times D2 \times H2}{W2}$$
